Subject: Searching for an internship for fall 2020

Dear Hiring manager,

I am looking for an opportunity for software developer intern with great interest and would like to learn more about your company and if you have positions available. Although I am still a second year Software engineering student, I taught myself a lot of the fundamentals of software engineering outside of school. I know how to build clean, performant and maintainable code. In terms of programming languages, my skills range from Java, C#, C, C++, to HTML, CSS and JavaScript. I am also familiar with various algorithms, designs patterns, and testing methods.

In my previous job at Culture C, I enjoyed creating a full inventory system from scratch using my Back-end knowledge in NodeJS and Front-end knowledge with HTML, CSS and JavaScript.

In my web development course, I built a full online grocery store that utilizes PHP and MySQL. This site contains many features such as Login/Register system, cart system and an order system. This project taught me a lot of valuable things about PHP and MySQL.

My personal projects also taught me valuable knowledge about software engineering, especially when I wrote my 2D game OpenGL engine from scratch. This project taught me a lot about algorithms, API design, Computer graphics, and much more.

Thank you for your time and consideration. I look forward to meeting with you and discuss the employment opportunity you have to offer in addition to the skills and qualification I possess.

Sincerely,

Shadi Jiha
